### **Mathematics - APSC**

In mathematics, a real number is a value of a continuous quantity that can represent a distance along a line. The adjective real in this context was introduced in the 17th century by René Descartes, who distinguished between real and imaginary roots of polynomials. The real numbers include all the rational numbers, such as the integer  $5$  and the fraction  $4/3$ , and all the irrational numbers ...

Abstract. We define a certain finite set in set theory  $\{\varphi(x)\}$  and prove that it exhibits a universal extension property: it can be any desired particular finite set in the right set-theoretic universe and it can become successively any desired larger finite set in top-extensions of that universe.
