1 CHAPTER 9 . Identification and Characterization of Haemophilus influenzae. H. influenzae are small, pleomorphic, gram-negative bacilli or coccobacilli with random arrangements. H. influenzae is a fastidious organism which grows best at 35-37°C with ~5% CO₂ (or in a candle-jar) and requires hemin (X factor) and nicotinamide-adenine-dinucleotide (NAD, also known as V factor) for growth.

CHAPTER 9 Identification and Characterization of

Contact before sending: Contact KHEL at 785-296-1620 before sending; Test method: Culture; Specimen requirements: Enteric Confirmation (Salmonella, Shigella, STEC). Or Stool in Cary Blair or GN broth previously identified by cultural or molecular methods as Salmonella, Shigella, STEC, or other requested bacterial enteric organisms. Seal liquid media with parafilm or other appropriate barrier film.

346 Bulletin of the World Health Organization | May 2004, 82 (5) Objective To use new data to make a revised estimate of the global burden of typhoid fever, an accurate understanding of which

The global burden of typhoid fever - World Health Organization

Introduction. *E. coli* and related bacteria constitute about 0.1% of gut flora, and fecal-oral transmission is the major route through which pathogenic strains of the bacterium cause disease. Cells are able to survive outside the body for a limited amount of time, which makes them ideal indicator organisms to test environmental samples for fecal contamination.

Salmonella is a genus of rod-shaped (bacillus) Gram-negative bacteria of the family Enterobacteriaceae. The two species of Salmonella are *Salmonella enterica* and *Salmonella bongori*. *S. enterica* is the type species and is further divided into six subspecies that include over 2,600 serotypes.. Salmonella species are nonspore-forming, predominantly motile enterobacteria with cell diameters between ...
