> 3. Root-finding > 3.1 The bisection method In this chapter we assume that $f: \mathbb{R} \rightarrow \mathbb{R}$ i.e., $f(x)$ is a function that is real valued and that x is a real variable.

Root-finding for Nonlinear Equations

In computer science, binary search, also known as half-interval search, logarithmic search, or binary chop, is a search algorithm that finds the position of a target value within a sorted array. Binary search compares the target value to the middle element of the array. If they are not equal, the half in which the target cannot lie is eliminated and the search continues on the remaining half ...

In computer science, divide and conquer is an algorithm design paradigm based on multi-branched recursion. A divide and conquer algorithm works by recursively breaking down a problem into two or more sub-problems of the same or related type, until these become simple enough to be solved directly. The solutions to the sub-problems are then combined to give a solution to the original problem.
