Course Description: This third level design course is intended to prepare the target persons with the ability to perform the following electrical design calculations:

EE-4: Basic Electrical design course " Level III

1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...
