when air conditioning or cooling (e.g. arenas) is used. Therefore, there are three primary classes of reasons why the control of air flow is important to building performance: 1. Moisture control – water vapour in the air can be deposited within the envelope by condensation and cause serious health, durability, and performance problems 2.

Understanding and Controlling Air Flow in Building

Air barrier systems control air flow and thereby control convective vapor flow. As can be seen from the previous sections, the control of air flow provides other benefits and has at least five performance requirements to meet. Canadian building codes require an air barrier system in all enclosures that would be adversely affected by condensation.
