An epileptic seizure is a brief episode of signs or symptoms due to abnormally excessive or synchronous neuronal activity in the brain. The outward effect can vary from uncontrolled jerking movement (tonic-clonic seizure) to as subtle as a momentary loss of awareness (absence seizure). Diseases of the brain characterized by an enduring predisposition to generate epileptic seizures are ...

August 2017â€”There was no trip to the spa. But some sections of the 2017 edition of the CAP Laboratory Accreditation Program checklist are looking trimmed and toned compared with last yearâ€™s checklists. A microbiology section that is shorter by eight pages, fewer Individualized Quality Control Plan reporting requirements, and a new section addressing chain of custody once again reflect the ...

Fibromyalgia is currently understood to be a disorder of central pain processing or a syndrome of central sensitivity. Clauw describes the syndrome as a diffuse problem of sensory "volume control" such that patients have a lower threshold of pain and of other stimuli, such as heat, noise, and strong odors.
