### **Environmental through a distributed Sustainability**

Distributed computing is a field of computer science that studies distributed systems. A distributed system is a model in which components located on networked computers communicate and coordinate their actions by passing messages.[1] The components interact with each other in order to achieve a common goal.

### **Distributed computing - Wikipedia**

Book Preface. The field of distributed computing covers all aspects of computing and information access across multiple processing elements connected by any form of communication network, whether local or wide-area in the coverage.
