Animal testing, also known as animal experimentation, animal research and in vivo testing, is the use of non-human animals in experiments that seek to control the variables that affect the behavior or biological system under study. This approach can be contrasted with field studies in which animals are observed in their natural environments. Experimental research with animals is usually ...

There should seldom be a question about the possibility that a laboratory animal is in pain, if basic principles are followed. U.S. Government Principles for Utilization and Care of Vertebrate Animals Used in Testing, Research, and Training (IRAC, 1985) states that "unless the contrary is established, investigators should consider that procedures that cause pain or distress in human beings may ...
