Perfect your process. Gencoa is a customer-focussed company providing expert solutions for the vacuum coating sector throughout the world. For more than twenty years, Gencoa has been perfecting its range of magnetron sputter cathodes and plasma deposition components, in addition to the introduction of process control and sensing products.

Wireless power transfer is a generic term for a number of different technologies for transmitting energy by means of electromagnetic fields. The technologies, listed in the table below, differ in the distance over which they can transfer power efficiently, whether the transmitter must be aimed (directed) at the receiver, and in the type of electromagnetic energy they use: time varying electric ...

Sputter deposition is a physical vapor deposition (PVD) method of thin film deposition by sputtering. This involves ejecting material from a "target" that is a source onto a "substrate" such as a silicon wafer. Resputtering is re-emission of the deposited material during the deposition process by ion or atom bombardment. Sputtered atoms ejected from the target have a wide energy distribution ...

The past several blogs have focused on the evolution of magnetron sputtering, from the simple diode cathode to cylindrical magnetrons. The latest development in this technology is high power pulsed magnetron sputtering (HPPMS), also known as high power impulse magnetron sputtering (HIPIMS) [1].
