In this section we will give a quick review of trig functions. We will cover the basic notation, relationship between the trig functions, the right triangle definition of the trig functions. We will also cover evaluation of trig functions as well as the unit circle (one of the most important ideas from a trig class!) and how it can be used to evaluate trig functions.

In algebra, a cubic function is a function of the form $f(x) = ax^3 + bx^2 + cx + d$ in which a is nonzero.. Setting $f(x) = 0$ produces a cubic equation of the form $ax^3 + bx^2 + cx + d = 0$. The solutions of this equation are called roots of the polynomial $f(x)$. If all of the coefficients a , b , c , and d of the cubic equation are real numbers, then it has at least one real root (this is true for all odd degree polynomials).

Hi. I'm just finishing Chapter 7 tonight (still 2 more problems). I'll start on Chapter 8 tomorrow. The plan is to average 5 problems per day over the course of each month (if you look at the archives on the side you'll see that each month has 150 or 155 entries), which means I'll finish volume 1 on June 23.

In mathematics, an integral assigns numbers to functions in a way that can describe displacement, area, volume, and other concepts that arise by combining infinitesimal data. Integration is one of the two main operations of calculus, with its inverse operation, differentiation, being the other. Given a function f of a real
